The Book Doctors Guide to:

Fitting Slip-over Covers

Introduction

The Achilles' heel of softcover materials is their durability. If they are allowed to wear and become unusable (or simply unattractive) prematurely, the initial cost savings will be lost. There exists a wide variety of Gresswell products designed to protect softcover materials and extend their useful life.

Strong and durable 180 micron PVC book covers are available in a wide variety of sizes. Unlike vinyl, these covers will not degrade. PVC covers are also safe for archive materials.

Create a 'like new' appearance...

...whilst providing excellent protection

Demco's best-selling slip-over book covers are crystal clear and will enhance any book. All covers are flexible to assist in covering a wide range of sizes. These hard-wearing covers are suitable for high-circulation titles. A must have for all new library stock.

**Long-lasting
protection from
as little as 35p
per book!**

Measuring guide

*all measurements are in mm

1. Measure book height

Height = 196mm

Tip: A H196mm slip-over cover should fit but we recommend allowing an extra 2mm, so choose H198mm

2. Measure book width

Front = 128mm

Back = 128mm

3. Measure book spine

Spine = 30mm

Overall book width =

Front + Back + Spine = 286mm

So, choose product

4206-325 - H198 x W310

To identify the right cover, use Demco's **user friendly table** or check page 19 of the Gresswell catalogue.

Fitting instructions

1. Place front cover into the internal flap of the slip-on cover

2. Place back cover through the band

3. Straighten and smooth the cover

4. Slip flap through the band

5. Use finger and thumb to press along the edges, ensuring the slip-over book cover sits flat

6. Covered and ready to use!
